

The LOOP® Blocks 45 and 60 are also available with longer Loops for swiveling or reef purposes.

The deep groove sheaves ensure safe rope lead in harsh conditions.

KOHLHOFF LOOP® Blocks are compact and lightweight multi-purpose snatch blocks fastened with a loop. The short standard loop minimizes damage to the deck, hull or superstructure. Longer loops are available to extend the range of use and allow the block to swivel. Due to its construction the loops always remain easy to unfasten, even after full loading. KOHLHOFF LOOP® Blocks are lightweight, compact and easy to use.

KOHLHOFF LOOP® Blocks are available with plain bearings or ball bearings. The ball bearing blocks in fact have a two stage bearing. At lower loads the ball bearing minimizes friction, at higher loads the plain bearing comes into effect. The loops are covered with extra Dyneema® to provide a smooth surface and to increase the abrasion resistance. They are terminated by a diamond knot or a pin.
